FUNCTIONALITY & DESIGN

With our brand-new **smartline** we developed a product which skilfully combines functionality with natural design.

The new panels have an integrated wood fiber absorber. Therefore, the acoustic panel has in addition to the sound absorption property a thermal insulating effect.

The panels come with high-quality wood veneer in two different finishes, oak and silver fir. Only sustainable sourced material is used for production. Whether as a subtle style element or striking wall and ceiling cladding - interior concepts are acoustically optimized with the Smartline and at the same time optically enhanced.

In addition, the panel offers easy assembly. The smart panels can be easily fitted into one another, using a tongue and groove connection in the absorber. It can be mounted on the wall and ceiling using a standard nail gun or a mounting rail. We offer you the right equipment.

As an innovative manufacturer, we have succeeded in combining perfect design, outstanding acoustic and environmental consideration into one high-quality product.

“The acoustic panel with an integrated absorber made of natural wood fiber.”
